

How to minimize the size of a pdf document

Continue

PDFs can get pretty big, especially if you’re adding lots of images and objects. If you’ve created a PDF that’s too big—maybe you’re trying to email it or maybe it just takes too long to load—here’s how you compress your PDF to a smaller size. RELATED: What Is a PDF File (and How Do I Open One)? Whatever your reason, reducing the size of a PDF is a straightforward procedure regardless of what program you’re using. Below we’ll look at some ways you can effectively reduce the size of your PDF documents in Windows, macOS, and directly through your web browser. Free PDF Compressor: Compressing a PDF on Windows Windows users don’t have a program that handles PDFs by default, so in order to open and compress a file, you must download some third-party software. We recommend Free PDF Compressor. It’s super lightweight and offers a variety of compression qualities from which to choose. After you open a PDF in Free PDF Compressor, select a compression rate and then hit “Compress” to begin the process. The newly compressed file is saved as a copy in the same location as the original file. Preview: Compressing a PDF on macOS If you need to compress a PDF file on macOS, you’re in luck. Mac users can use the built-in Preview app to compress PDFs without having to download any third-party applications. First, open your file in Preview by selecting the file in Finder, hitting Space, and then clicking the “Open with Preview” button. In Preview, head to File > Export. In the export window, select the “Reduce File Size” option from the “Quartz-Filter” drop-down menu and then click the “Save” button. We do have one quick warning about this trick. The new document you’re exporting replaces the original document, so you might want to make a copy first in case things don’t turn out how you want. SmallPDF: Compressing a PDF Online If installing additional software isn’t for you, then using an online compression tool is the way to go. We recommend SmallPDF. It’s easy, fast, and you are the only one that can access your file. Your file is also deleted from their servers after an hour. After selecting a file to compress, the compression process only takes a few seconds. You’re shown how much your file has been compressed and given a download link for your new file. Whether you’re dealing with large eBooks, user manuals, or interactive PDFs, they can end up being larger than expected, but with the use of one of the many compression applications out there, you’re able to keep the file size down while keeping the quality intact. How to compress a PDF Just drag-and-drop your PDF file in the box above, wait for the compression to complete and download your file. It’s that simple. Security guaranteed Your files will be permanently deleted from our server after one hour. No one has access to your files and privacy is 100% guaranteed. All platforms supported Smallpdf.com is browser-based and works for all platforms. It doesn’t matter if you use Mac, Windows or Linux. Perfect quality Reduce your scanned PDF files to 144 dpi which is perfect for uploading files to the web and through email. Easy to use The file size limit is 5GB. Even with large PDFs, it will take a few seconds for our compression tool to work its magic. In the cloud All the file compressing takes place in the cloud and will not consume any capacity from your own computer. Pages Welcome Add images, shapes, and media Position and style objects Use writing and editing tools Manage and organize documents Keyboard shortcuts Keyboard shortcut symbols Copyright If your document includes image, audio, or video files, you can reduce its file size to make it easier to send, post, or share. If you don’t want to permanently change your original document, you can save a copy of it with a smaller file size instead. Note: It’s possible to choose a combination of options that makes the file size larger. Helpful? Thanks for your feedback. We are often asked at One Legal how to reduce the size of a PDF filing to ensure that is accepted by a court’s case management system and therefore successfully eFiled. There’s a whole range of rules out there on file sizes depending on what back-office system the court is using to manage the filings it receives. In most eFiling courts throughout the U.S. the file must be below 35 MB, and each California court has its own limits. You can check out the maximum file size for your court on our Support Center, and find information on other local court rules, too. In general, though, there’s very little reason for PDFs to be hundreds of megabytes large unless they contain exhibits that absolutely must be saved as very high-resolution photographs. By following just a few simple steps, even filings that are hundreds of pages long can be brought down to meet requirements. How to determine the size of your PDF document If you’re using Adobe Acrobat, checking the size of your PDF is simple. Just click on File, then Properties. You’ll see lots of information about your document, including its size. Alternatively, you can navigate to the folder containing your document, right-click on it, and click Properties. Larger files will take longer to upload, are cumbersome to share electronically (via email, for instance), and will use up your law firm’s file storage more rapidly. And even when the courts accept larger file sizes, they prefer to handle smaller, optimized files. So, how should you set about reducing the size of your PDF documents? Here are five quick tips. #1 Avoid scanning PDFs wherever possible It’s a common misconception that, to create PDFs, or to combine multiple documents and exhibits into a single PDF, you need to print everything out and scan it together. Electronically converted files are generally much smaller in size than scans. You only ever need to scan documents that exist in paper form only — all other documents can be electronically converted from the original file by saving them as PDFs. Furthermore, individual documents can be quickly combined as PDFs using software such as Adobe Acrobat, avoiding any need to print out documents to combine them. Read more: How to correctly redact a PDF #2 Save as “Reduced Size PDF” If your file is still very large after you’ve created it electronically, rather than by scanning, there are still some steps you can take. The simplest is to re-save your file as a reduced-size PDF. In the latest version of Adobe Acrobat, open the PDF you wish to re-save as a smaller file, choose File, Save as Other, and then Reduced Size PDF. You’ll be prompted to select the version compatibility you need and then you can click OK to save. We recommend setting your compatibility with at least Acrobat X, as that version is still widely used. This method is quick and simple but be warned that it will reduce the quality of images and will remove digital signatures. If you want more control over how your PDF is compressed in Acrobat, use the optimization method described below instead. Read more: How to convert a fillable form for eFiling #3 Use Adobe Acrobat’s PDF Optimizer Sometimes you’ll want more control over which elements of your document are reduced in quality or removed. In these circumstances, you should choose the PDF optimizer tool. Before you optimize a file, it’s a good idea to audit the file’s space usage — review which elements, such as fonts, images, and so on, are using the most data. The results of this may give you ideas about where best to reduce file size. To begin optimization, open your PDF in Acrobat, click File, Save as Other, and then Optimized PDF. In the dialog box that appears, click on Audit space usage in the top right-hand corner. You’ll see a table of information a bit like this: The optimizer gives you complete control over the elements of your PDF that will be compressed. Select the checkbox next to a panel (e.g. Images, Fonts), and then select options in that panel. There’s a lot of choices, so it’s worth reading through the Adobe help file to understand what each option does. Okay, we know that not everyone uses Adobe Acrobat. What options are available to you if you’re using other software or only the basic Adobe Reader? Here are two more options for reducing the size of your PDF file if you’re not using Acrobat. Read more: 7 myths and misconceptions about the PDF #4 Reduce the size as you save in Word In Word, to convert a document to PDF, you use the Save As option. This option generally produces a fairly small file, depending on the number of images in your document. However, if you find that your Word-converted PDF is still too large, there is a further option in Word that will produce a significantly smaller file. Here’s how to use it. Open the Word document you are going to convert to PDF. Click on the File button and then Save As. In the Save as type menu, select PDF and enter your preferred file name. Here’s the extra step: where it says Optimize for at the bottom of the dialog box, select Minimum size (publishing online). Read more: How to correct OCR errors with Adobe Acrobat #5 Use a print-to-PDF tool Other (non-Adobe) PDF tools generally contain features that will reduce the size of your PDF. However, if you’re looking for a free option, there are some available. Currently, the most downloaded free PDF creator (according to download.com) is PrimoPDF. Once you’ve installed PrimoPDF, simply open the PDF you wish to compress (in Acrobat Reader, or a web browser, for example), press Ctrl+P to open the print dialog, select PrimoPDF from the list of available printers, and then click Create PDF. Note that this method, like simply saving as a reduced-size PDF in Adobe Acrobat, reduces image quality and resolution.
